Proposal for Travel Agency Desktop Management System

Project Overview

This project is a **desktop application** designed for a travel agency. Built using **C# and WPF**, it includes functionalities like user authentication, a multi-functional home screen, and database operations. The application will demonstrate core concepts like **event handling, animations, threading, and database integration using LINQ to SQL**, fulfilling the specified guidelines.

Features to Implement

1. Splash Screen

- **Description:** A loading screen with an animation indicating application startup.

2. User Authentication Module

- **Description:** A secure system for login, signup, and password recovery.

3. Home Screen

- **Description:** A central dashboard with 5 buttons linking to distinct features.
- **Options (Each Opens a New Window):**
 1. **Manage Travel Packages:** Add, update, delete, or view travel packages.
 2. **Bookings:** Handle customer bookings (CRUD operations).
 3. **Payment Management:** Record and track payments.
 4. **Feedback:** Collect and display customer feedback.
 5. **Reports:** Generate summaries like total bookings, payments, etc.

4. Database Integration

5. GUI Guidelines

Expected Outcome

1. A functional travel agency management system.
 2. A visually appealing and intuitive desktop application.
 3. Clear documentation and code structure suitable for the viva.
-

Conclusion:

The Travel Agency Desktop Management System will streamline operations through a user-friendly application, showcasing essential programming concepts.
